

JOIN THE BRIDGE INSPECTION REVOLUTION!

Use *Inspection On Hand™* from Trilon with your Pontis Bridge Management System, and you'll revolutionize the way you do bridge inspections.

"With IOH™, you'll stop wasting your time re-typing and filing data. Instead, you'll just use it."

- John Hagan, Trilon, Inc.

In the field, IOH means no more coding manuals, paper records, and expensive laptop headaches for inspectors. IOH runs on a hand-held computer that's a quarter of the cost of a good laptop. The unit also recognizes handwriting, and solid-state technology makes it remarkably durable. Unlike a laptop, if the unit is damaged, your data remains protected.

IOH runs on Microsoft® Windows® CE compatible handheld computers.

Everything a bridge inspector needs fits in one pocket!

Back in the office, one easy download from the hand held unit means no more duplicated data entry of handwritten notes. Suddenly, your information is no longer waiting for keypunching, trapped in filing cabinets, or only in one location. After you experience the enhanced productivity and efficiency of IOH, you'll never want to go back to the old way of doing things.

For more information on how Trilon can revolutionize your bridge inspection operations, e-mail us at info@trilon.com, visit us at www.trilon.com, or call us at 215-790-6265.

And welcome to the revolution!
